Abstract	None
Models Events, Application, Log, Admin, Projects, Resources, Team Models	
• Define Schemas for mongoDB	• Databases

	None
Databases Events, Application, Log, Admin, Projects, Resources, Team Schemas	
• Store Data • Query Data • Create Schema	• Models • Controller

	None
Config (environment)	None
• Define environment variables (proxy port and database connection	• None

	None
Server	Routes, Controllerss
• Provide communication instance for endpoints and frontend • Store application global variables and states	• Axios

	Server
Routes	Endpoints
• Define paths for endpoints	• Controller • Endpoints

	Server
Controller	Application, Team and Resources Endpoints

• Define the functionality of endpoints • Handle requests and response • Query databases	• Databases • Routes

	None
Axios	None

• Sending requests to Server • Receiving response from Server	• Components • Server

	None
Components (App)	Event, Login, Register, Application, Resource, Projects, Admin Interface, General Info Views

• Define URLs for pages • Render pages • Validate Payloads	• Axios
